

CONSTRUCTION OR RECONSTRUCTION OF STANDARD FOOTPATH CROSSINGS

General Information

- 1. Where kerb and gutter exists, Council will permit owners' contractors to construct a standard concrete layback in the kerb in accordance with Council's Standard Drawing No's. DS1, DS7, DS8, DS9 & DS10. The work is to be inspected and approved by Council's Civil Assets Inspector, as set out in this document.
- 2. Footpath crossings are not to be constructed unless an approved layback already exists or where one is incorporated into the footpath crossing construction.
- 3. Where an approved layback exists, Council will permit the construction of a footpath crossing in accordance with the enclosed standard drawings.

Standard Requirements

- An application and payment of inspection fees must be made prior to commencing any construction within the road reserve (property boundary to property boundary).
- The minimum width of any footpath crossing shall be **3.0 metres for residential** (unless an existing narrow layback is to be used) **and 5.5 metres for light commercial areas** as indicated in Standard Drawing DS8 & DS9.
- The maximum width of any footpath crossing shall be 5.5 metres for residential and 7.2 metres for light commercial areas.
- Crossing widths and construction details for heavy commercial or industrial sites must be designed to suit and plans submitted to the Supervisor Civil Assets for approval.
- The number of crossings permitted shall be limited to one per property with frontages up to 18 metres and two where the frontage exceeds 18 metres. Where two crossings are permitted, a minimum separation of 7 metres must be provided. Location of existing trees and utility services etc. may prevent the installation of two crossings.
- Footpath crossings shall be constructed at right angles to the kerb and gutter or road centre-line where
 practicable. In special circumstances, including the requirement to avoid obstructions, and subject to prior
 approval, this angle may be reduced to not less than 60 degrees to the kerb and gutter or the centre-line of
 the road, as indicated in Standard Drawing DS8 & DS9.

Levels

- The required boundary level must be determined by the contractor based on the attached vehicular crossing
 profile (DS10). A longitudinal section along the entire driveway from garage door to road centre line is
 required to be submitted to ensure compliance with Council Standard drawing DS10.
- Any change in slope of the vehicular access at/or within the property boundary should be designed to avoid vehicles scraping. The grade of the driveway within the property, are matters for determination by the owner and for which Council cannot accept any liability.
- The longitudinal street grade or slope of the driveway at the property boundary must follow the grade of the adjoining kerb and gutter.

Inspection

- Council's Asset Inspector must be given a minimum 24 hours notice for formwork inspections. Requests for inspection made after 2pm will not be scheduled for the following day. Work must not proceed until the inspection is complete and approval to pour has been given.
- Inspections will only be carried out between 8.00am and 11.00am, Monday to Friday. Please call 9806 8250 for bookings.

CONSTRUCTION OR RECONSTRUCTION OF STANDARD FOOTPATH CROSSINGS

Specification

- 1. All works shall be completed to the satisfaction of the Supervisor Civil Assets or his nominated representative.
- 2. All Footpath Crossings shall be constructed in Plain Concrete using ready mixed concrete to thickness and with reinforcement as shown on Standard Drawing DS8 or DS9. Concrete strength shall be no less than 25 MPa at 28 days and the surface shall be broomed or wood float finish. Expansion jointing shall be placed to the full depth of the slab against existing or new dish gutter or layback, existing concrete footpath and at the property boundary line. No other material, colouring or surface treatment will be permitted unless the crossing is in the CBD or Neighbourhood Centre.

All footpath crossings constructed within the Parramatta CBD area or Neighbourhood Centres, are to comply with the appropriate paving policy.

Council will accept no liability for the restoration of any damage caused to this type of crossing by any public utility, authority or other person, and this is a condition of approval for the construction of paved crossings.

- 3. It is the owner's/contractors responsibility to ensure that work is carried out in a safe manner without inconvenience to users of the road or footpath. The owner shall ensure that the works are properly barricaded and lit in accordance with Australian Standard AS 1742.3 *Traffic Control Devices for Works on Roads*, and that he/she and his/her contractor comply with the provisions of the NSW Occupational Health and Safety Act 2000. It is also the owner's responsibility to ensure he/she and his/her contractor carries adequate public liability insurance. Council will accept no liability for injury or damage to any person or thing during the course of the work
- 4. The owner of the property shall negotiate with any public utility or statutory authority (including Council) whose services may be affected by the proposed crossing and shall bear the full cost of any alterations required to such services. On any State Road / Regional Road (list attached) or other high risk location e.g. near school, shops or traffic lights etc., the crossing is to be constructed in 2 stages such that pedestrian access is not impeded. Safe pedestrian access is to be provided past the works in accordance with Australian Standard AS 1742.3. On all other roads, barricades or bollards with flashing lights are to be placed adjacent to the work to allow a 1.5m wide pedestrian access along the roadway. Appropriate signage is to be placed in the street to advise motorists of the work.
- 5. Works undertaken must be complete to the satisfaction of the Asset Inspector, inclusive of all restoration, adjustment of adjoining footpath or verge surfaces, relocation of services, and any other works deemed necessary, with all costs for such works to be borne by the owner/contractor.
- 6. Where an existing layback or dish gutter is made redundant by the construction of the new crossing, they are to be removed and replaced with a standard kerb construction (see DS1). Any disused driveway surface is to be removed and the area re-grassed to the satisfaction of the Asset Inspector.
- 7. Crossings on corner allotments are not to be constructed within 6 metres of the intersection of street alignments.

8. Crossings shall not encroach over the frontage of an adjoining allotment without prior approval of Council. Applicants should seek the written agreement of the neighbouring property owner and submit this for Council consideration.

NOTE

Unless existing gutter is damaged, it shall not be removed without the approval of the Asset Inspector. Preference is given to removal of kerb profile or existing layback only and the new construction secured to existing gutter by 300mm Y12 dowels at 600mm centres. Where the removal of existing gutter is unavoidable the owner shall make allowance for reinstatement of the road surface in the event that it is damaged during the removal.

Restoration of the road surface shall be carried out to the following specification.

- 1. Saw-cut existing road surface a minimum of 500mm parallel to the gutter construction and remove the bituminous material to a minimum depth of 70mm.
- 2. Replace the bituminous material with minimum AC10 Hot Mix compacted in accordance with AUSSPEC #2, Specification 306. The evenness of the resulting restored surface shall be such that an impact is not transmitted to traffic passing over the restoration.
- 3. The roadway shall be restored in a continuous manner to a condition equivalent to that existing at the commencement of the work.
- 4. All edges adjoining existing bituminous/asphalt surfaces are to be sealed with an approved rubberised bitumen seal.

Definition of Terms

1. Footpath Crossing:

The area between the kerb and gutter and the property boundary, which is used to drive from the roadway into the property.

Also sometimes called; crossing, vehicular crossing, vehicular entrance, driveway, vehicular access.

2. Footpath

The area between the kerb and gutter and the property boundary. Also sometimes called; verge, footway, nature strip.

Note: a constructed concrete or asphalt (bitumen) footpath may form part of the wider term 'footpath' used in this document.

3. Layback

The "flattened" part of the kerbing which is used for driving a vehicle across the footpath. Please note that "roll kerbing" does not require the construction of a layback.

Also sometimes called; a gutter crossing.

As most of Council's roads have kerb and gutter, the use of the term layback is sufficient. However, there will be places where the term "gutter crossing" may be used to describe the physical structure which provides access from the roadway to the footpath.

Before requesting a final inspection for works outside the property boundary please ensure that the following has been completed.

- 1. All works outside the property boundary associated with the development must have been inspected by council.
- 2. That all works have been completed in accordance to the City of Parramatta Council specifications & standards.
- 3. The nature strip has been restored with back fill & turfed. This includes all landscaping works if required. Please ensure that when back filling with soil it is compacted next to the new concrete works so that there are no depressions.
- 4. All Road Opening Permits (ROP) have been inspected by council's Restoration Officers and have been paid and that all the works associated with said ROP have been completed. To arrange an inspection or final payment contact the restoration officers on 9806 8250 or email at restore@parracity.nsw.gov.au

Before requesting a bond release for the development.

- A request for the bond release must be submitted as per the Development Application (DA) in writing. Please send request to Council's Supervisor Civil Assets via email <u>footpathcrossings@parracity.nsw.gov.au</u>. Please ensure that all the DA conditions have been met and completed before requesting your bond release.
- 2. All works have been completed as per notes above & final inspection certificated has been received from council.
- 3. All work must be completed to the development both inside & out.
- 4. No heavy machinery, heavy materials or skip bins are to be left on site. This is to ensure that council's assets will not be damage when machinery, heavy materials or skip bins are removed.
- 5. All fencing must be removed from council's property.
